WORKOUT GUIDELINES

As you restart your fitness journey, it's essential to begin gently and progress at a comfortable pace:

- Start with Light to Moderate Weights: *Focus on building strength safely in the first month. Begin with manageable weights, and as your body adapts, try using progressive overload.*

- Supersets: *This program includes a lot of supersets, which means performing 2 or more exercises back-to-back without rest. For example, if you see 1A, 1B, 1C, you'll perform each exercise in sequence before resting.*

- Engage Your Core: *When doing resistance exercises, engage your core by bracing your abs (imagine someone is going to punch your stomach). This will help protect your back and rebuild core strength.*

- Stay Hydrated: *Make sure to hydrate between sets to support your recovery and energy levels.*

- Gradually Increase Intensity: *As your body continues to heal, you can slowly increase the intensity and duration of your workouts. Always listen to your body, and progress at a pace that feels safe for you.*

- Stretching & Recovery: *Remember to stretch before and after workouts to avoid injuries and muscle knots. Foam rolling is also a great option for loosening tight muscles and can be done at home.*

- Enjoy the Process: *Find a playlist you love and have fun while working out! It might seem a bit challenging at first, but I promise it gets easier by the second week as your body adjusts.*
